Design choices

This barchart shows the CO_2 emission for the most polluting countries in the year 2015. The barchart is ordered from most polluting to least polluting, from left to right, which gives a clear overview of what countries pollute the most. The data is converted to give GT to make comparison between countries easier. On the same page, a link to the source can be found. About the design of the barchart:

- The y-axis shows the emission, and ranges from 0 to 10 (and a bit extra for china).
- The x-axis shows the countries, 60 degree rotated to better read the axis.
- The bars are in the color lightsteelblue, so once you hover over them the red pops out.
- The tooltip, which shows you a more precise (but still rounded) number of CO_2 emission, is black with text for optimal reading.
